

## LABORATORY SERVICES

Our modern purpose built laboratory is both sizeable and diverse. Its' design provides a temperature controlled, well equipped, modern facility able to offer a range of geotechnical tests from basic moistures and PSD's through to consolidation and effective stress testing.

At Geotechnical Engineering Ltd we strive to deliver the highest level of service possible throughout the company. Within our laboratory we recognise that our Clients appreciate the timely delivery of accurate results.

We firmly believe that communication is key to providing a great service, which is why every schedule is overseen by one of our dedicated Client managers, from start to finish.

From receipt of each schedule, right through to the delivery of the final results, our team of highly trained and experienced technicians, (many NVQ qualified), ensure that the geotechnical testing is carried out in accordance with BS1377 and ISRM standards. Test results are then issued in the format required by the Client including PDF and AGS.

All testing is performed within the scope of our quality system, which is certified to ISO 17025 and the accreditation is awarded by UKAS.

The full range of tests accredited by UKAS can be found at [www.ukas.org](http://www.ukas.org)

We offer a collection service throughout the UK for your convenience. Please contact us for further information.

**Classification Testing**  
**Consolidation and Permeability**  
**Shearbox and Ringshear**  
**Effective Stress**  
**Rock Testing**
